Jason is a technology and consulting leader with deep experience helping organizations unlock business value through data, analytics, and AI. As Senior Director of Data, Analytics & AI within the Strategic IT Practice at Growth Operators, he partners with clients to modernize data environments, develop scalable analytics capabilities, and create technology strategies that support growth, operational efficiency, and informed decision-making.

His experience spans enterprise data strategy, solution architecture, cloud platform modernization, analytics engineering, and AI-enabled transformation. Jason has successfully designed and implemented modern data platforms across Azure and AWS, helping organizations improve data accessibility, strengthen reporting capabilities, and lay the foundation for advanced analytics and AI adoption.

Known for combining technical expertise with strong business acumen, Jason works closely with executive and operational leaders to align data and technology investments with strategic objectives. He brings a practical, results-oriented approach to solving complex challenges, translating business requirements into scalable solutions that drive measurable outcomes.

In addition to leading complex technology initiatives, Jason has built and managed high-performing consulting teams and delivered large-scale transformation programs across diverse industries. His ability to bridge technology, data, and business strategy helps organizations accelerate digital transformation, improve decision-making, and maximize the value of their technology investments
